Full Stack Web Development (MERN)

PROJECTS

Apple clone | https://apple-app-694fd.web.app/

Structuring the Client side of the web page in different components for readability and reusability.

Utilizing Nodejs to build the Backend to create a dynamic web page by pulling data from the MySQL database.

Using Axios to fetch an API from YouTube to display the current videos from the Apple channel

Implementing react-router to display all the different pages without refreshing the window.

Importing jQuery and Bootstrap to create a responsive webpage depending on the screen of the viewer

Netflix Clone | https://netflix-clone-a3157.web.app/

Fetching an API from the movie database to render the front page.

Implementing Bootstrap and custom CSS to replicate the original Netflix.

Importing a YouTube trailer from NPM to show the specific movie trailer that was clicked on

Amazon clone

Designing the architecture of the webpage and code layout for efficiency and understanding.

Creating Context API to render and pass variable state changes to all components and prevent prop drilling.

Importing Currency Format from NPM to render the calculated amount of all the products selected in the cart system.

Implementing react-router to display the home page and checkout without refreshing the window.

Utilizing different React Hooks to create a robust website.
